Using your FlipClips™

- 1 Choose your preferred band configuration/orientation and line up your FlipClips™ accordingly. *Shown in OTT configuration. See details below.*
- 2 Carefully fasten the FlipClip™ to your Scout. Take care to ensure the screw is installed straight into the hole to avoid cross threading and keep it loose for now to leave room to insert your bands.
- 3 Place your band all the way into the FlipClip™ and press/pinch the FlipClip™ firmly to hold the band in place.
- 4 Tighten the fastener the rest of the way. ***Do NOT over tighten. Hand tight is just right.***
- 5 Carefully stretch your bands while inspecting the attachment point to ensure the bands are securely fastened. Always wear eye protection!
- 6 Have fun!

IMPORTANT: If you experience a fork hit, please retire your FlipClip™ as it may have suffered damage not visible to the eye . . . and seriously, don't overtighten the FlipClip™.

FlipClips™ work with flat bands of all sizes and looped tubes (please see our YouTube video for instructions). Proper Installation is critical. Be sure to align the FlipClip™ properly as shown below.
