BANDING YOUR SLINGSHOT

The Wrap & Tuck Method

For the photos, we're using the Scout and the included lanyard as the loop. You can also use a piece of ribbon, wire, any sturdy pulling device, forceps or just your thumb. You may also use office rubber bands for tie-in material.

1. Lay down one wrap of tie material on target side of slingshot.
2. Place the band over the back of the slingshot (target side) and begin wrapping.
3. Apply at least THREE wraps, stretching the tie in material as you wrap.
4. After at least THREE tensioned wraps, place a loop on the target side of the band grooves.
5. Make TWO more tensioned wraps.
6. Carefully holding the tensioned wraps in place, feed the tag end through the loop.
7. Pull the loop back underneath the final two wraps.

^
THE BANDS ATTACH
TO THE TARGET SIDE
OF THE SLINGSHOT.

INSPECT THE
FORK TIE-INS
REGULARLY.

THE "EARS" (THE TRIMMED END
OF THE BAND) MUST FACE OUT. >
